Summary

Computer Science undergraduate at NIT Hamirpur with experience building full-stack applications, backend APIs, and machine learning pipelines. Strong foundation in data structures, algorithms, and software development with 400+ problems solved across LeetCode, GeeksforGeeks, and Codeforces.

Relevant coursework : Data Structures & Algorithms, Object-Oriented Programming, Operating Systems

Education

National Institute of Technology (NIT), Hamirpur

August 2024 - June 2028

Bachelor of Technology in Computer Science and Engineering

CGPA : 7.79/10.0

Technical Skills

- **Programming Languages:** C++, Python, JavaScript
- **Web Technologies:** HTML, CSS, React
- **Frameworks:** FastAPI, Flask
- **Libraries:** Pandas, NumPy, Scikit-Learn
- **Databases:** MongoDB, SQLite, Firebase/Firestore
- **Developer Tools:** Git, GitHub, Docker, Postman, VS Code, Figma

Projects

CompactIQ – Enterprise Compliance Engine

FastAPI, React, Electron, SQLite

[GitHub Link](#)

- Built a desktop-based enterprise compliance engine with a FastAPI backend, React/Electron frontend, and SQLite persistence.
- Integrated Google Gemini to extract dependency and compatibility rules from vendor documentation and store them in a searchable knowledge base.
- Developed automated endpoint scanning and compatibility visualization to identify compliance issues across application dependencies.

Silent Strokes

React, Vite, Firebase, Firestore, Tailwind CSS

[Live Demo](#) [GitHub Link](#)

- Built a full stack art portfolio and studio management platform using React, Firebase Authentication, and Cloud Firestore.
- Implemented protected admin routes and real-time commission management using Firebase Authentication and Firestore.
- Designed a responsive interface with interactive galleries and storytelling-driven user experience using Tailwind CSS.
- Designed the project as a community driven codebase, enabling volunteers to contribute features, UI improvements, and fixes through GitHub pull requests.

Network Security Threat Detection Platform

Python, MongoDB, Docker, Scikit-Learn

[GitHub Link](#)

- Developed an end-to-end phishing URL detection pipeline covering MongoDB ingestion, preprocessing and model training.
- Built reusable configuration, logging, exception handling, and data ingestion modules to improve pipeline reliability and maintainability.
- Containerized the ML model using Docker for reliable, reproducible deployment.

Experience

Open Source Contributor

Jul 2026 – Present

- Contributed features, bug fixes, and UI improvements to open source projects through GitHub pull requests.
- Worked across existing React and application codebases while following project specific architecture, coding standards, and testing practices.
- Addressed maintainer review feedback, resolved merge conflicts, and integrated upstream changes using Git workflows.

Achievements

- Solved **400+ DSA problems** across LeetCode, GeeksforGeeks, and Codeforces. [\[Coding Portfolio\]](#)
- Selected among the **Top 200 scholars** in Flipkart Girls Wanna Code from **28,000+ registrations**. [\[Certificate\]](#)
- Contributed multiple merged pull requests to open source **React/Python** based projects.
- Created and maintained an **open source** web platform, managing contributions and changes through GitHub pull requests.
